# WF series weapon fixture

The WF 1011 weapon fixture is universally applicable for all long firearms.

It is suitable for both single and sustained firing.

The front clamping position is freely selectable depending on the length of the weapon used.

An optional electromagnetic trigger device is available for example in forensic laboratories. This ensures a safe triggering of unknown and potential harmful weapons.

By combining different parts a great variety of weapons can be mounted. This includes also different submachine guns or modified shot guns.

The WF 1012 weapon fixture is suitable for both pistols and revolvers.

We supply specially-made clamping jaws for every weapon model.

The WF 1012 fixture is equipped with recoil damping.

Electromagnetic triggering is available as an option.

Protective clamping jaws ensure no damage to weapons during use.

## Technical data

### Model

#### WF 1011

#### WF 1012

#### Short firearms

Pistol	-	•
Revolver	-	•
